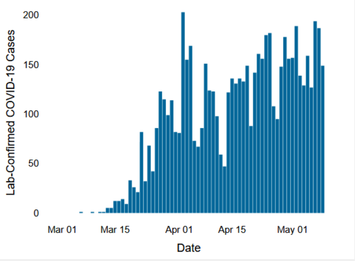
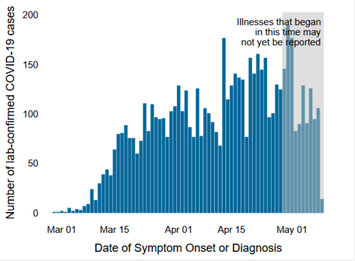
State Total	6251

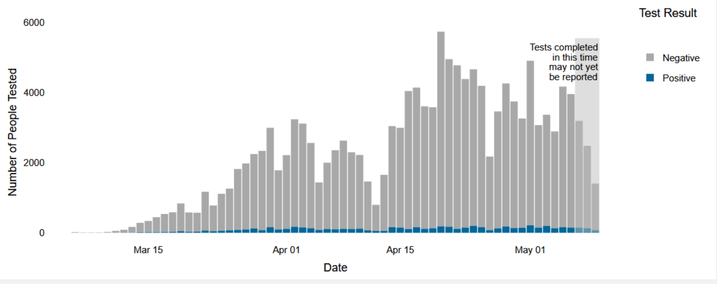
COVID-19 Cases by the Date a Positive Test was Reported to Public Health



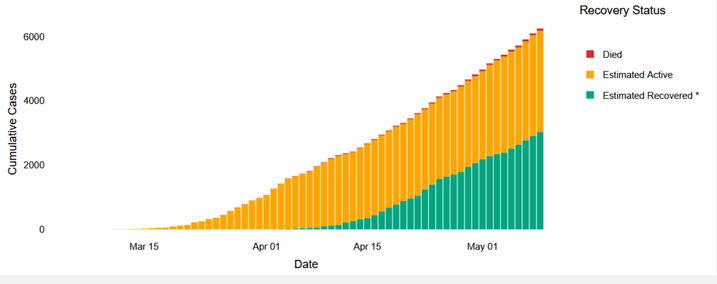
COVID-19 Cases by Date of Symptom Onset or Diagnosis (data will backfill)



Number of People Tested by Date



Cumulative COVID-19 Cases with Estimated Recoveries * (does not include the current day)



Small Area Case Rates

The below map shows the crude case rate per 100,000 people per Utah Small Area. Crude case rates show the number of COVID-19 cases in an area given its population. Case rates may be higher or lower depending on the age of people living in a small area and how much testing has occurred there. Small areas with low populations may have disproportionately high or low rates depending on few cases and the number of tests performed in an area. A high rate in an area does not necessarily indicate a current outbreak because rates are calculated from the beginning of the pandemic. "Utah Small Areas" are geographic areas with population sizes ranging from about 8,000 to 86,000. Small areas were created by UDOH and local health departments to assess health data and policies. More information on Utah Small Areas can be found at: ibis.health.utah.gov.
